WHAT IS CLAIMED IS:

- 1. A method to purify autoantibodies from therapeutic intravenous immunoglobulin preparations (IVIg) using affinity chromatography on a ligand bound to a solid support.
- 2. The method of claim 1, wherein the autoantibodies are selected for reactivity with soluble proteins of human serum.
- 3. The method of claim 1, wherein the ligand used for affinity chromatography is composed of a mixture of proteins present in human serum other than IgG.
- 4. The method of claim 1, wherein the ligand used for affinity chromatography is composed of purified individual serum proteins.
- 5. The method of claim 1, wherein the ligand used for affinity chromatography is composed of animal proteins or other molecules which can be recognized by the autoantibodies.
- 6. The method of claim 1, wherein the purified individual serum proteins comprises ferritin.
- 7. The method of claim 1, wherein the solid support used for affinity chromatography is Sepharose or an equivalent thereof.
- 8. The method of claim 1, which further comprises a step of recovering non-autoreactive antibodies for further processing in a flow-through fraction of the affinity chromatography column.
- 9. Autoantibodies isolated from therapeutic intravenous immunoglobulin preparations (IVIg), which comprises substantially purified autoantibodies capable of forming autoimmune complexes in human serum.
- 10. The autoantibodies of claim 9, wherein the autoimmune complexes are capable of binding to and activating complement in human serum.

- 11. The use of autoantibodies of claim 10 for the preparation of a medicament in the treatment of autoimmune and inflammatory disorders.
- 12. A method for the treatment of autoimmune and inflammatory disorders in a patient, which comprises administering a therapeutically effective amount of autoantibodies of claim 10 to said patient.
- 13. A pharmaceutical composition for the treatment of autoimmune and inflammatory disorders in a patient, which comprises a therapeutically effective amount of autoantibodies of claim 10 in association with a pharmaceutically acceptable carrier.
- 14. An autoantibodie-free therapeutic intravenous immunoglobulin (IVIg) preparation, which is substantially free of autoantibodies.
- 15. A pharmaceutical composition for the treatment of immunodeficiency in a patient, which comprises a therapeutically effective amount of an autoantibodies-free therapeutic intravenous immunoglobulin (IVIg) of claim 14.
- 16. The pharmaceutical composition of claim 15, which further comprises a protein.
- 17. The use of autoantibodies-free IVIg of claim 14 for the preparation of a medicament in the treatment of immunodeficiency.
- 18. A method for the treatment of immunodeficiency in a patient, which comprises administering a therapeutically effective amount of an autoantibodies-free IVIg of claim 14 to said patient.
